Foster + Partners completes first project in Africa with BMCE branches in Morocco

The first regional headquarters branches for Moroccan bank, BMCE (Banque Marocaine du Commerce Extérieur) have opened in Rabat and Casablanca, with a further branch in Fez due to complete shortly they are the first buildings by Foster + Partners to be completed in Africa. The banks contemporary interior is wrapped by a traditional, energy efficient envelope and their design is based on a modular system, which utilises local materials and craftsmanship to create a striking new emblem for BMCE.

The design follows a kit-of-parts approach, with variations in colour and scale according to the banks location. Each building comprises a concrete frame, with an entrance colonnade and a series of bays repeated on a modular grid. The bays are enclosed by glazed panels and 200mm-deep screens, which provide shade and security.

The screens are cut from sheets of stainless steel a special low-iron mixture that does not heat up in the sun which are curved to create a geometric design, based on traditional Islamic patterns.

The branches are designed to be highly energy efficient and use locally-sourced materials, such as black granite and grey limestone. All BMCE flagship branches feature an earth tube, an electricity-free cooling system: fresh air is drawn into an empty pipe that encircles the building underground, where it is naturally cooled by the earth and

released into the branch.

The dome, a recurrent element in each bank, is a reference to the design of a number of new schools in Morocco, which have received philanthropic support from BMCE Bank Foundation. The interior of the dome is rendered in tadelakt, a local plaster technique, while the exterior is clad in zellige, traditional ceramic tiles. The dome form sweeps down into the banking hall to create a sculptural curved bench.

Lord Foster commented:

The BMCE flagship branches our first completed buildings in Africa reinterpret elements of traditional Moroccan architecture, combining these with a contemporary interior that reflects the Bank's progressive approach to its customers. This blend of ancient principles and modern technology is also reflected in an energy efficient design. The result is a series of buildings that are sustainable and each one, uniquely, of its place.
